

# Control Room

Live Alerting for Real Time Crime Centers

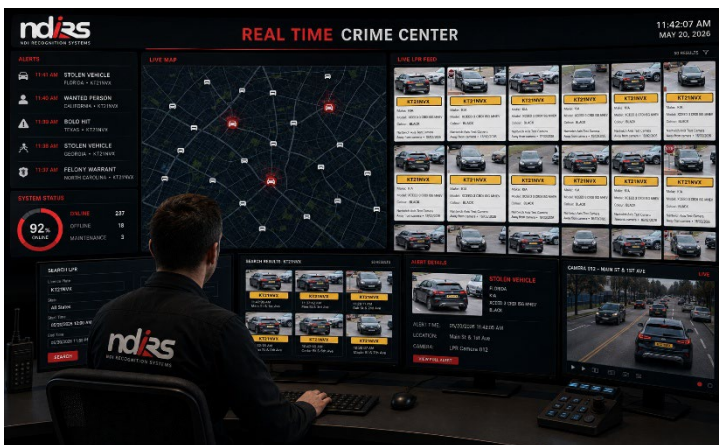

Control Room is specifically designed for Command and Dispatch Centers using VISCE® Back Office technology, providing dispatchers and officers with a streamlined way to view, monitor, and manage their ALPR system with greater ease and efficiency.

Its web-based interface features intuitive Live Camera Windows that display images, timestamps, license plate data, and the text of the 10 most recent reads from each camera—all in real time. A convenient tabbed layout allows users to monitor up to eight cameras per tab for quick, organized access.

Real-time Alerts provide immediate notification of hotlist matches, giving users the detailed vehicle and alert information they need to quickly assess the situation and take appropriate action.

## KEY FEATURES & FUNCTIONALITY

- **Proactively navigate and manage your ALPR system** with real-time situational intelligence for enhanced awareness and faster response.
- **Monitor crime hotspots and communities more effectively** with multi-system, full-screen views that provide a comprehensive operational picture.
- **Identify and prioritize critical incidents** using reliable data and analytics, giving dispatchers the insight needed to guide officers with confidence.
- **Improve real-time decision-making** by bringing critical ALPR intelligence into a centralized, easy-to-monitor environment.
- **Mobile Access** allows users with no hardware on patrol to view alerts based on zones and enhances response times.
