

Road Warrior™

Radar LPR Trailer

The Road Warrior™ Radar is a portable Automatic License Plate Recognition (ALPR) and speed detection system integrated into a highly mobile speed trailer. Featuring an **18-inch speed display and three static speed signs**, the Road Warrior combines speed awareness and enforcement with covert license plate capture in a cost-effective, self-contained solution.

Designed for rapid deployment and covert operation, the Road Warrior integrates NDI Recognition Systems® ALPR technology for **capturing, analyzing, and monitoring license plates**. The radar, overspeed flashing display, and ALPR system operate simultaneously for efficient **day and night performance** across a wide range of environments.

Ideal for **checkpoint operations, smaller agencies, temporary deployments, and covert applications**, the Road Warrior is powered by heavy-duty deep-cycle batteries supplemented by solar panels for extended operating life. Under optimal conditions, the system can operate for **up to two weeks without recharging**. Requiring only one operator, the trailer can typically be deployed in approximately **5–15 minutes**.

This trailer comes completely ready to deploy with all LPR components installed.

KEY FEATURES & FUNCTIONALITY

- Integrated infrared (IR) and color camera
- Secured wireless data transmission
- 18-inch speed display with 3 static speed signs: **25, 35, and 45 mph**
- Full radar system with overspeed flashing
- Day and night ALPR operation
- Solar-assisted power for extended battery life
- High-visibility display for speed awareness and enforcement
- Simultaneous speed detection and covert license plate capture
- Self-contained design for flexible deployment
- Lightweight and easy to deploy
- Use it with Live Alerts or Control Room for immediate response
