

# Road Warrior™

## Message LPR Trailer

The Road Warrior™ VMS is a feature-rich, rapidly deployable radar messaging and Automatic License Plate Reader (ALPR) system designed for temporary, mobile, and covert-ready applications. Powered by battery-augmented solar capabilities, Road Warrior combines mobility, operational flexibility, and advanced vehicle intelligence in a single cost-effective platform.

Equipped with NDI Recognition Systems® VeriPlate® software and VISCE® Back Office (BOF), Road Warrior captures and reads license plate image data and wirelessly delivers actionable alerts to authorized personnel.

A fully programmable 24" x 60" display supports up to 25 messages. Users can select predefined messages or create custom messaging with scheduled dates and times for targeted deployment.

Designed for extended field operation, the Road Warrior VMS trailer can operate for up to seven days without recharging under optimum conditions, making it an ideal solution for temporary deployments, traffic messaging, targeted enforcement, and covert operations.

This trailer comes completely ready to deploy with all LPR components installed.

### KEY FEATURES & FUNCTIONALITY

- Integrated infrared (IR) and color camera
- Secured wireless data transmission
- Variable message display for built-in and custom messages
- Multiple sign size options
- Full radar system with overspeed flashing
- Day and night ALPR operation
- Solar-assisted power for extended battery life
- High-visibility display for speed awareness and enforcement
- Self-contained design for flexible deployment
- Easy to deploy
- Use it with Live Alerts or Control Room for immediate response
- Remote management for message display
